

Serving Federal, State and Local Government Agencies

Total Resource Solutions for Government Officials

Today's technology continues to emerge in the marketplace. Security products has evolved from overhead doors to biometrics, advanced network and physical access control. Time technology has enhanced from issuing handwritten documents (for public filing) to electronic time/date stamp machines that syncs directly to the National Institute Standards & Technology (NIST) for time verification.

Amano delivers such powerful tools for security, time verification and workforce management. We offer stand-alone or integrated solutions, ranging from hi-tech biometrics, access control, CCTV, time stamp validation, time & attendance, parking and floor care systems.

Biometrics in the Government

Government officials have elected biometrics as another security measure to protect our country. They were prompted to implement several biometric applications such as ID card verification, passenger screening, visitor tracking, background screening and logical and physical authentication. As a result, biometrics are being used worldwide in government agencies such as municipalities, law enforcement (forensics), border management, aviation and transportation.

Amano's Fingerprint powered by Sagem technology provides absolute certainty of a person's identity. Our world-leading algorithms and optical scanners capture true minutia points, 2 billion fingerprints in over 70 countries and supports the U.S. Government FIPS 201 Standards (TWIC, PIV and CAC Endpoint Cards). Amano's Fingerprint was designed to manage even the most damaged fingerprints accurately and consistently in the harshest environment.

Government Access Management

Controlling restricted areas is as equally important as securing intellectual property in government agencies. Amano Multi-Technology Readers works in conjunction with Amano's Access Control Systems to prevent unwanted visitors from entering government restricted areas. Amano's MTR's integrates with most proximity card technology, which enables you to use your existing identification card. Our readers have the ability to read dual frequencies (125 kHz and 13.56 mHz) which facilitates the addition of cards to an existing site without replacing cards.

Amano's Nexus Lite was designed to provide municipalities with real-time web based access control. The Network ready controller manages up to 8 doors (expandable), 16 readers with anti-pass back, supports 1,000 users (3 cards per user) with the capacity to buffer the last 5,000 event transactions.

The Nexus 220 mid-range access control application remotely controls access to one municipality to 128 government buildings (entry and exit control), thereby providing security at every location with centralized integration and monitoring.

AmanoNet enterprise solution provides government officials with access control through proximity cards. This multi-site system operates up to 3,000 buildings utilizing a networkable client/server system. AmanoNet also integrates with Amano's DVMS Suite, cutting-edge cameras, vandal resistant metal readers and time and attendance systems, thereby giving you complete control over your organization.

Closed Circuit Television and Video Surveillance Systems

CCTV surveillance systems has become more prevalent in the government. The combination of cameras and CCTV as a deterrent against theft and crime brings this powerful security method one step closer to the forefront.

Amano DVMS (Digital Video Management System) offers powerful search tools for rapid incident tracking with megapixel processing. Our latest analog or IP camera configurations combined with our digital video recorder deters workplace violence, false accident claims, theft and fraud. This security technique provides crucial evidence of events occurred in your organization.

Employee Time Tracking Made Simple

Amano's Time and Attendance systems deliver easy-to-use employee time tracking solutions to effectively manage your payroll. Amano's suite of applications range from low to high end enterprise software solutions, coupled with a broad range of hardware devices, from badge swipe to biometrics. Our software seamlessly integrates with Amano's access control and most popular payroll applications such as ADP, QuickBooks, Ceridian, Peachtree, Paychex and more.

Time Validation for Municipalities

Amano's PIX-200 provides electronic time & date stamped on time sensitive documents for municipalities. The PIX-200 delivers accurate, time synchronization with atomic time functionality. This password protected clock prevents tampering with settings and reduce time card fraud.

The TS-3000i[®] electronic time recorder conveniently allows you to time stamp validated documents. Our web based time and date stamp syncs directly to the National Institute Standards & Technology (NIST) or internal/external NTP time source. The clock provides highly accurate time that is +/-3 seconds per week. This time stamp requires no server/desktop software, minimal IT staff involvement and setup is quick and simple to install. Full reporting & e-mail available.

Track Movements with Parking Validation

AmanoMcGann Parking is the industry leader in revenue control parking systems. Combined with the flexibility to integrate time and attendance and access control in a total resource, Amano offers a powerful, economical solution for government officials.

Reduce Cleaning Costs

Amano Pioneer Eclipse helps government officials reduce cleaning costs. Amano's range of efficient propane powered cleaning equipment allows janitors to burnish much larger areas of floor space in a fraction of the time and at a lower cost.

Amano Dealer Network

Talk with Amano today to identify the nearest Amano Dealer to you. Amano's extensive network of Certified Dealers throughout the USA, Mexico and Latin America provides help with:

- Determining your requirements and providing the most cost effective scale of solutions
- Installing and commissioning your system
- Rapid and experienced support
